

ROLE CARD · PURCHASING · SUPERVISOR / MANAGER

Purchasing

Pages: Purchasing · Upload PO · MRP. The approved supplier list (VND-001...VND-100) is already loaded.

BUY

1	Create a PO on the Purchasing page against an approved vendor; add lines (part, quantity, price, promised date). Supervisor and up can build POs.
2	SEND to the vendor is Manager/Admin only — supervisors build, a manager issues. Only draft or approved POs can be sent.
3	Upload PO: drop a vendor document and the AI extracts it — but the created PO lands directly in SENT (issued, immediately receivable), with no manager Send step. Review the extracted data carefully before clicking Create. Needs the AI egress switch ON — a “disabled for your company” message means the admin has it off, not a fault.
4	Check MRP for shortages before you buy.

VENDORS

- Vendor create/edit is Manager and up. Approving a vendor stamps its approval date.
- Wrong vendor? Managers and admins can **Delete Vendor** — a soft-delete that deactivates the record but keeps it for audit and can be restored. It is refused while the vendor still has an active PO, so close or cancel those first. Never create a duplicate as a workaround.

WATCH OUT

TRAP — Bulk-imported POs land directly in SENT status — immediately receivable. A typo'd import instantly “issues” POs, which is why imports are admin-driven. A bad PO can be soft-deleted (**Delete PO**, Manager/Admin) as long as nothing has been received against it.
