

ROLE CARD · SHIPPING

Shipping

Page: Warehouse > Shipping tab. One button here is terminal — read step 3 twice.

SHIP

1	Create a shipment from the Ready-to-Ship list: ship-to, quantity, packing notes.
2	Print the packing slip and shipping paperwork.
3	MARK SHIPPED is terminal: it closes the work order. There is no un-ship button. Triple-check the WO number before you click.
4	Carrier buttons (validate address / rate shop / buy label) return 409 while the carrier egress switch is off — that is policy, not a bug. Manual shipping works regardless.
5	A Certificate of Conformance auto-issues on ship when required; minting one manually is a Quality/Manager action, not Shipping.

WATCH OUT

TRAP — A wrong shipment marked shipped = a live work order closed with no UI undo. Slow down on this button.
