

CHEAT SHEET · OFFICE & CHAMPIONS

Known Sharp Edges

Verified open issues and by-design behaviors, so “it’s broken” becomes “yep, known.” Anything not on this list: capture the exact error text, the page, and the time, and escalate.

WHAT HAPPENS	WHAT IT IS	WHAT TO DO
New WO Create button “does nothing”	BUG — silent no-op on non-step-aligned run times	Re-enter run times in clean 0.1 increments
Work Order Costing report errors	BUG — known server error (500)	Skip it this week; use the Job Costing page
Routing sidebar shows “0 operations”	BUG — display-only miscount	Open the routing itself for the real list
BOM / Routing Release fires instantly	QUIRK — no confirmation dialog	Treat Release as final; a mistake means a new revision
Can't delete a customer or lot	GAP — no UI deactivate path (vendors now soft-delete + restore)	Route customer/lot mis-entries to the admin; never work around with duplicates
“Rate limit exceeded” at login	DESIGN — 5/min email, 3/min badge, per building IP	Wait about 60 seconds; don't hammer the button
“Account is locked”	DESIGN — 5 failed passwords locks 30 minutes	No admin unlock exists — wait it out, then try once
Carrier / label buttons return 409	DESIGN — egress kill switch is off	Expected until the admin enables it; manual flows still work
Wallboard KPIs show an em dash	DESIGN — empty denominator, not zero	Normal early in the week; never a week-1 metric
Operator “can't find” Purchasing etc.	DESIGN — role-gated navigation	Working as intended
Logged out mid-coffee / blank login page	DESIGN — 15-min idle logout (the session itself renews while you work; it only expires after 7 days unused)	Compliance behavior — log back in
Leftover TEST records (TES001, TEST-CLQA-001...)	CLEANUP — QA artifacts pending deactivation	Never quote, receive, or issue against them
