

ROLE CARD · ESTIMATING & SALES · SUPERVISOR+

Estimating & Sales

Pages: Quotes · AI RFQ Quote · Estimate Workbench · Quote Calculator · Customers · Shop Data.

QUOTE TO WORK ORDER

1	Quotes page: create, add lines, SEND to the customer. When accepted, CONVERT to a work order (Supervisor and up).
2	AI RFQ: upload the RFQ package (PDF / XLSX / DXF / STEP), Generate AI Estimate, then review the assumptions and the Missing / Needs-Review list — the parser never invents required fields. Approve & Create Quote when satisfied.
3	Estimate Workbench: build lines, Recalc, clear every review flag, then Finalize — it stays blocked while any calc error remains. Export the audit trail with the estimate.
4	The customer PDF excludes operation-level times; the internal export includes them. Send the right one.

WATCH OUT

- TRAP** — Both estimate engines price from Shop Data rates and quote settings — verify those reflect real shop rates before quoting real work this week.
- TRAP** — RFQ parsing is deterministic and works even with AI egress off; PO Upload and Copilot do need egress ON.
