Getting Help During Go-Live Week

There is no automatic error reporting from your screen — if something looks wrong, saying so IS the alerting system. Daily 15-minute standup at 07:00 at the pilot work center.

THE LADDER

- | | |
|---|---|
| 1 | Your floor champion or office lead — first stop. They carry the role cards and the Known Sharp Edges sheet; most “is this broken?” questions end here. |
| 2 | The admin — anything involving accounts, roles, badges, stations, imports, or the egress switches. |
| 3 | Jon — suspected real bugs, data problems, or anything the admin can't clear. Hotfixes and rollbacks happen at this level. |

WHEN YOU REPORT A PROBLEM, CAPTURE

- The **exact error text on screen** — it is the server's real message, not decoration.
- The page you were on, the time it happened, and your name.
- What you clicked right before. A photo of the screen beats a description.

SIXTY-SECOND SCRIPTS

- “Account is locked” > it unlocks itself after 30 minutes; nobody can rush it.
- “Rate limit exceeded” > wait about a minute, try once.
- Carrier / label button shows an error saying egress “is disabled for this company” > that feature is switched off by policy, not broken.
- A dash instead of a number on the TV board > not enough data yet, not zero.

IF THE NETWORK OR A DEVICE DIES

- Kiosks and the lobby tablet **do not queue anything offline** — buttons disable. Keep working the part.
- Write counts / visits on the **paper fallback form** at the station (every kiosk and the lobby has one).
- Hand completed sheets to the back-entry owner the same day — they key records in signed in as themselves, so the record stays attributable.
- Dead tablet: swap hardware and tell the admin — stations can be revoked and re-issued in minutes.
