# Purchasing

Pages: Purchasing · Upload PO · MRP. The approved supplier list (VND-001...VND-100) is already loaded.

## BUY

|   |                                                                                                                                                                                                                                                                                                                                                     |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Create a PO on the Purchasing page against an approved vendor; add lines (part, quantity, price, promised date). Supervisor and up can build POs.                                                                                                                                                                                                   |
| 2 | <b>SEND</b> to the vendor is Manager/Admin only — supervisors build, a manager issues. Only draft or approved POs can be sent.                                                                                                                                                                                                                      |
| 3 | Upload PO: drop a vendor document and the AI extracts it — but the created PO lands directly in <b>SENT</b> (issued, immediately receivable), with no manager Send step. Review the extracted data carefully before clicking Create. Needs the AI egress switch ON — a “disabled for your company” message means the admin has it off, not a fault. |
| 4 | Check MRP for shortages before you buy.                                                                                                                                                                                                                                                                                                             |

## VENDORS

- Vendor create/edit is Manager and up. Approving a vendor stamps its approval date.
- There is no delete button for vendors — a mis-entry goes to the admin. Never create a duplicate as a workaround.

## WATCH OUT

**TRAP** — Bulk-imported POs land directly in SENT status — immediately receivable. A typo'd import instantly “issues” POs, which is why imports are admin-driven.
