Who this is for: Everyone at Werco who uses the system — operators, supervisors, quality, shipping, purchasing, office staff, and managers. This is the first guide you should read. Later guides cover your specific job.

What you'll be able to do: Sign in (at your desk or at a shop-floor station), find your way around the screen, read your home Dashboard, search for anything in seconds, use a few handy keyboard shortcuts, and understand when and why the system signs you out.

Signing in

Your account is created for you by your administrator. You don't sign yourself up. When you start, your administrator or IT will give you your sign-in details and tell you which way to sign in.

The sign-in screen. Pick how you want to sign in at the top, then enter your details.

There are two ways to sign in. At the top of the sign-in box you'll see two buttons: **Badge ID** and **Email**. Click the one that matches how you sign in.

Sign in with email and password

Use this if you work at a desk or you've been given an email login.

1. Click the **Email** button at the top of the sign-in box.

2. Type your work **Email** address.
3. Type your **Password**. (Click the eye icon on the right of the password box if you want to see what you typed.)
4. Click **Sign In**.

Tip: Forgot your password? Ask your administrator to reset it for you — that's the way to get a new password today.

Sign in with your badge at a shop-floor station

Shop-floor stations (kiosks) let you sign in fast with just your employee or badge ID — no password needed. This is the usual way for operators.

1. Click the **Badge ID** button at the top of the sign-in box.
2. In the **Employee / Badge ID** box, type your badge number (for example) or your full employee ID (for example).
3. Click **Sign In**.

Tip: Your 4-digit badge ID works even if you type it short or long. Typing , , or your full employee ID will all sign you in to the same account.

Heads up: Shop-floor stations are shared. When you're done, sign yourself out so the next person doesn't run work under your name. At a station you sign out by entering your badge ID again — the system asks for it to confirm it's really you.

If you get locked out or forget your password

For security, the system locks an account after **5 wrong password tries** on the **Email** sign-in. The account stays locked for **30 minutes**.

- This lockout is for the **email-and-password** way of signing in. Badge sign-in at a station has no password, so mistyping a badge ID doesn't lock you out — but an account that's already locked (from email tries) or has been deactivated can't badge in either.
- If you're locked out, you can wait 30 minutes and try again — or, faster, **contact your administrator** and they can unlock you right away.
- If you forgot your password, **ask your administrator to reset it** for you. That's the only way to get a new password today.

Heads up: Don't keep guessing your password once you've gotten it wrong a few times — you'll lock yourself out. Slow down and check your details, or ask for help.

Your home screen: the Dashboard

After you sign in, most people land on the **Dashboard** — your live picture of the shop. (Operators are taken straight to their shop-floor station instead.) The Dashboard refreshes itself automatically, so what you see is current.

Live Shop Activity

Who is signed in, who is clocked into work, and what each active job is doing now

Signed in = active authenticated ERP session

Checked in = active time clock entry

No one is clocked into a job right now

Signed-in users still appear in the live presence panel, but there are no active time entries right now.

Signed in but not on a job
System Administrator

The Dashboard is the first thing most people see after signing in.

Here's what's on it, top to bottom:

- **Alerts** — colored bars at the top that flag things needing attention: overdue work orders, open NCRs (quality issues), equipment due or overdue for calibration, and low or critical stock. Click any alert to jump straight to it.
- **KPI cards** — quick numbers at a glance. The top row shows **Active Work Orders**, **Signed In Now**, **Checked In Now**, **Due Today**, **Overdue**, and **Signed In, Idle** (people signed in but not clocked into a job). The next row shows **Calibration Due**, **Low Stock Items**, **Completed Today**, and **Open NCRs**. Click a card to see the details behind it.
- **Capacity Overview** — a colored grid showing how busy each work center is over the next 7 days. Green means open or scheduled, amber means busy (70%+), and red means over capacity. Click any day to open the schedule.
- **Live Shop Activity** — who's clocked into a job right now, grouped by work center, with live progress on each job.
- **Signed In Right Now** — who is currently signed in across the system, and whether they're on a job ("Checked In") or just signed in ("Signed In").
- **Recent Completions** — the latest operations that were finished, who finished them, and how many units.

Tip: "Signed in" and "Checked in" mean different things. **Signed in** means someone has the system open. **Checked in** means they're actually clocked into a job on the time clock.

Finding your way around

Everything is reached from the menu on the left side of the screen — the sidebar. It's grouped by area of work, so related screens sit together.

The sidebar

groups every screen by the kind of work it's for. Click a group to expand it.

The main groups are:

- **Dashboard** and **Action Inbox** — your home view and your to-do items.
- **Shop Floor** — Time Clock, Operations (the station view), and Downtime.
- **Scheduling** and **Work Orders** — planning and tracking jobs.
- **Engineering** — Parts, Bill of Materials, Routing, and Engineering Changes.
- **Warehouse** — Inventory, Materials & Supplies, Receiving, and Shipping (all in one place).
- **Purchasing** — Purchase Orders, Upload PO, and MRP.
- **Sales & Quoting** — AI RFQ Quote, Quote Calculator, Quotes, and Customers.
- **Quality** — NCR / CAR / FAI, SPC, Calibration, Traceability, Customer Complaints, and QMS Standards.
- **Maintenance, Tool Management, OEE, Documents, Job Costing, Analytics, and Reports** — operations and reporting screens.
- **Administration** — setup, users, work centers, certifications, audit log, and settings.

Heads up: You'll only see the parts of the menu your role is allowed to use. If a screen a coworker mentions isn't in your sidebar, your role probably doesn't include it — that's normal, not a bug.

To open a screen: click a group to expand it, then click the screen you want. On a phone or tablet, tap the menu button (the three lines) at the top to open the sidebar.

Search anything fast

You don't have to hunt through menus. There's a search box that finds work orders, parts, customers, and more across the whole system.

Search finds work orders, parts, customers, and more — from anywhere in the app.

To search:

1. Press **Ctrl + K** (or just the **/** key), or click the **search** (magnifying-glass) button near the top-right of the screen.
2. Start typing what you're looking for — a work order number, a part number, a customer name.
3. Click a result to go straight to it.

Tip: This is usually the fastest way to get anywhere. When in doubt, search.

Keyboard shortcuts

A few keyboard shortcuts save time once you know them. To see the full list at any time, press **Ctrl + /** — a window titled **Keyboard Shortcuts** opens.

Press **Ctrl + /** anytime to see this list of shortcuts.

The handy ones:

Shortcut	What it does
Ctrl + K	Open search
Ctrl + N	Create a new item (on screens that support it)
Ctrl + S	Save your changes
Ctrl + Shift + R	Refresh the data on screen
Esc	Close a window or cancel

Tip: You don't need to memorize these. Search (Ctrl + K) and Esc are the two most worth learning first.

Guided tours & in-app help

You're not on your own. The system has built-in help:

- **Guided tours** walk you through a screen step by step, pointing out the important buttons. The tours adjust to your role, so you only see what's relevant to your job.
- A **Help & Tours menu** near the top-right of the screen lets you start a tour or find help whenever you want.

Tip: If a screen looks unfamiliar, look for the help menu in the top bar and start the tour for that page.

Staying signed in (and getting signed out)

The system keeps you signed in while you're working and refreshes your session quietly in the background — you won't normally notice. You don't need to keep signing in throughout your shift.

For security, though, your session won't last forever:

- After a while of having the app open, the system signs you out automatically and asks you to sign in again.
- The longest a single sign-in lasts is about **one day**. After that you'll always be asked to sign in fresh.
- You may get a brief warning before you're signed out, so you can save your work.

Heads up: Never share your account or let someone else work under your sign-in. The system records who did what for audit and traceability — work done under your account is recorded as done by you. At a shared station, always sign out when you step away.

Common problems

Symptom	What to do
"Login failed" message	Double-check your email/badge ID and password. On a station, make sure Badge ID is selected; at a desk, make sure Email is selected.
Account locked after several tries	You hit the 5-try limit on Email (password) sign-in. Wait 30 minutes, or ask your administrator to unlock you now. (Badge sign-in has no password and doesn't cause this.)
Forgot your password	Ask your administrator to reset it for you — that's the only way to get a new password today.
Don't have an account yet	Your administrator creates accounts. Ask your supervisor or administrator to set you up.
A screen you expected isn't in the menu	Your role may not include it. Check with your supervisor — this is usually normal.
Suddenly asked to sign in again	Your session timed out (this is normal, up to about a day). Just sign in again.
Dashboard numbers look stale	Click the refresh button at the top of the Dashboard, or press Ctrl + Shift + R .
Someone else's name is on your work	The previous person didn't sign out of the shared station. Sign them out (or sign in fresh) and tell your supervisor.

Where to get help

Ask your **supervisor** first for day-to-day questions. For account problems — getting unlocked, password resets, or a new account — **contact your administrator or IT**. New to a term you see on screen? Check the [Glossary](#).

Try it

A two-minute warm-up the first time you sign in:

1. Sign in the way your administrator told you (**Email** at a desk, or **Badge ID** at a station).
2. On the **Dashboard**, read the alert bars and KPI cards at the top. Click one card to see the detail behind it, then come back.
3. Press **Ctrl + K** (or **/**) to open **search**, type a work order or part you know, and open a result.
4. Press **Ctrl + /** to open the **Keyboard Shortcuts** window and skim the list. Press **Esc** to close it.

5. If you're at a shared station, **sign out** when you're done so the next person doesn't run work under your name.
